

was not tobacco ashes as  
inferred by Dr. Kenny.

It burned with such extreme  
heat as to scorch paper on and  
near paper where it lit.

Possibly this could have  
been a late Fourth of July  
firework or something similar  
but at any rate we are calling  
it to your attention as the  
answer the "learned" Dr. Kenny  
gave as being pipe ashes is full  
of ridicule an entirely unsatisfactory

Yours sincerely

FRED R. REIBOLD
